

Dump site near Rockwood, Pennsylvania

Until now, Pennsylvanians have had little choice in economically viable electronics recycling options. Landfills increasingly reject electronics waste due to the toxic, heavy metals they possess. Too often, obsolete or unwanted equipment is discarded in natural areas like those shown here. As you know, electronics discarded in this manner leach harmful toxins and chemicals into the environment and destroy the natural beauty of the commonwealth.

Who are we?

JVS Environmental works with your local community to provide full service electronics recycling and consulting services at minimal cost to you, the consumer. We are a locally owned and operated facility in western Pennsylvania with over 20 years combined waste management and environmental consulting experience. We are a fully permitted and bonded recycling company that adheres to the provisions set forth by the Pennsylvania Department of Environmental Protection (PADEP) ensuring that your electronics waste is recycled in a manner that sustains a healthy environment. JVS fosters a "zero landfill" policy meaning all constituents of your recycled equipment are reused rather than wasted.

The recycling process

To achieve these results JVS either picks up or receives at our facility your obsolete equipment. Next, your equipment is decommissioned by a technician who carefully separates and certifies the components for shipment to a recovery facility where the raw materials undergo rigorous extraction processes. JVS also protects your privacy by offering guaranteed data destruction services as well as physically destroying all digital media.
